

WALLIX ADMINBASTION SUITE (WAB)

ALL-IN-ONE PRIVILEGED ACCESS MANAGEMENT SOLUTION

Password Management

Secure passwords in a certified vault. Centralize password management and prevent end users from needing local/direct credentials.

Session Management

Monitor & control all privileged user sessions with both real time monitoring and full video audit trail.

Access Management

Access the entire suite via unified portal with full multitenancy.

Reduce your biggest security risks in a single day.

Gain Visibility and Control on privileged accounts.

Create an audit trail of every privileged user session.

- ✓ Cloud ready.
- ✓ Quick to deploy.
- ✓ Easy to adopt, deploy, use and maintain.
- ✓ Agentless and clientless.
- ✓ Certified robust security and audit trail.
- ✓ Enterprise ready with highly scalable architecture.

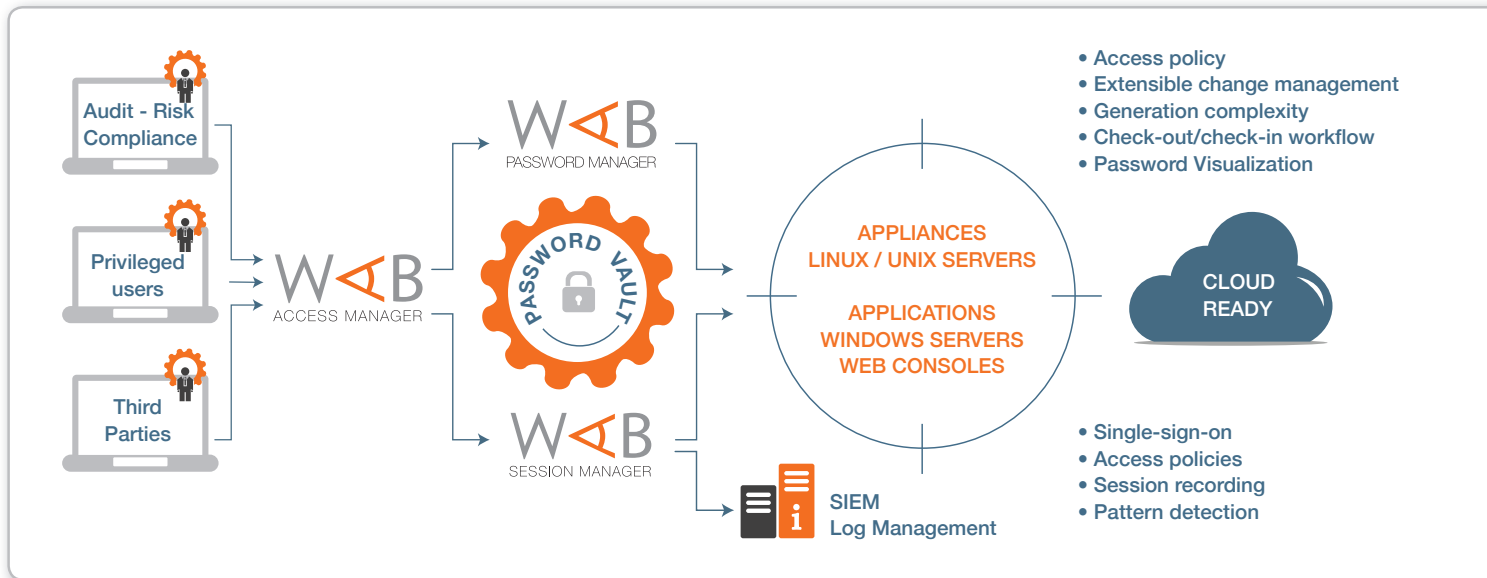

Privileged account abuse is the #1 tactic for hackers and malicious insiders and was involved in 62% of recent major data breaches according to IANS.

An Ideal Privileged Access Management Solution:

- *Has zero impact on your existing infrastructure*
- *Delivers understandable logging, recording and audit*
- *Integrates natively with your IT architecture*
- *Covers every target resource*
- *Effectively segregates production, development and disaster recovery networks*

Wallix AdminBastion Suite provides an all-in-one solution to protect privileged credentials and supervise privileged sessions all while creating an unimpeachable audit trail and providing preventive behavioral analytics:

- *No intrusive local agent to install*
- *No complex management consoles*
- *No hidden licensing costs*
- *No time consuming deployment*

The Wallix AdminBastion (WAB) consists of three integrated components:

- Prevent users from ever having local/direct access to devices, applications, or servers.
- Easily access, manage, change, and distribute passwords across the enterprise.
- Secure all privileged credentials in certified password vault.
- Provide single sign-on user access to every authorized system via the WAB's one-click web portal or native RDP/SSH clients. Utilize Active Directory or LDAP integration for even more transparent credential management.

- Set up and enforce access policies via centralized interface.
- Real-time supervision of privileged sessions.
- Produce compliance reports, audit trails, video records of specific privileged user sessions at the click of a button.

- Governs access to privileged accounts.
- Provides a single point of policy definition and policy enforcement for privileged access management with full multitenancy.

The WAB acts not just as a gateway or proxy between an end-user and a privileged system, but as a full intermediary, blocking all direct/local access to privileged systems.

DEPLOYMENT

WAB's agentless architecture enables rapid deployment with most configurations fully up and running within one to two days.

All communication is set to come into the server, so there are no firewalls to configure even on privileged systems.

Flexible deployment options include:

- ✓ Cloud
- ✓ On-premise
- ✓ Managed hosting

ABOUT WALLIX

65+ Employees.

70+ Resellers in 20 countries.

350+ active customers.

Public company listed on Alternext.

Here's what SC Magazine had to say about the WAB, which they named "Best Buy" for Privileged Access management

STRENGTHS: Flexible bastion-based deployment allows for ultimate integration in the enterprise.

WEAKNESSES: None that we found.

Other awards and certifications:
